

NeuroPress v2 inside Clio: predicted vs measured for the setting it picked, chunk by chunk

Each chunk: Clio's measurement (black) and v2's prediction made before learning from that chunk (colour), joined by a grey line. Cost model: 1 GB/s. Chunks stored raw have no measurement and are skipped.

● measured by Clio ● predicted, static v2 ● predicted, learn + explore ▲ prediction beyond the panel (drawn at its edge)
